

To whom it may concern:

Based on recent stringent changes to the minimum efficiency standards on non-condensing boilers sold in North America, RBI has shifted production of the Series 8900 boilers to our affiliate partner and hydronics expert located in Mexico: RBI Latin America.

RBI Latin America is based in Mexico. Please see the website for additional information: <http://www.rbi.mx/home/>

The recent legislation changes by both governments in the United States and Canada do not allow continued sales of these units in North America. These decisions have greatly affected our ability to manufacture these units in a cost competitive manner which further supports our decision to move manufacturing operations to a locale that still support our high quality products. The Series 8900 missed the North American efficiency standards by less than 2% points of efficiency and in most cases a single point (1%) of efficiency. The quality and performance of these units is exactly the same as it has been for the last 20 years of production.

All equipment will continue to be manufactured to the highest standards and certifications including ASME, CSA Design Certification and AHRI.

During this transition please do not hesitate to contact us with any questions.

Best regards,
